

# HIGHLIGHTS OF THE EMERALD NECKLACE

## Peck Road Water Conservation Park

A master plan of trails, gardens, user amenities, educational features and native plant landscaping is being developed for this urban jewel, with its mile-long lake.

## Rio Vista Park

A wide strip of land beside the Río Hondo, landscaped with native plants, will both celebrate the environment of the Río and double the size of the park.

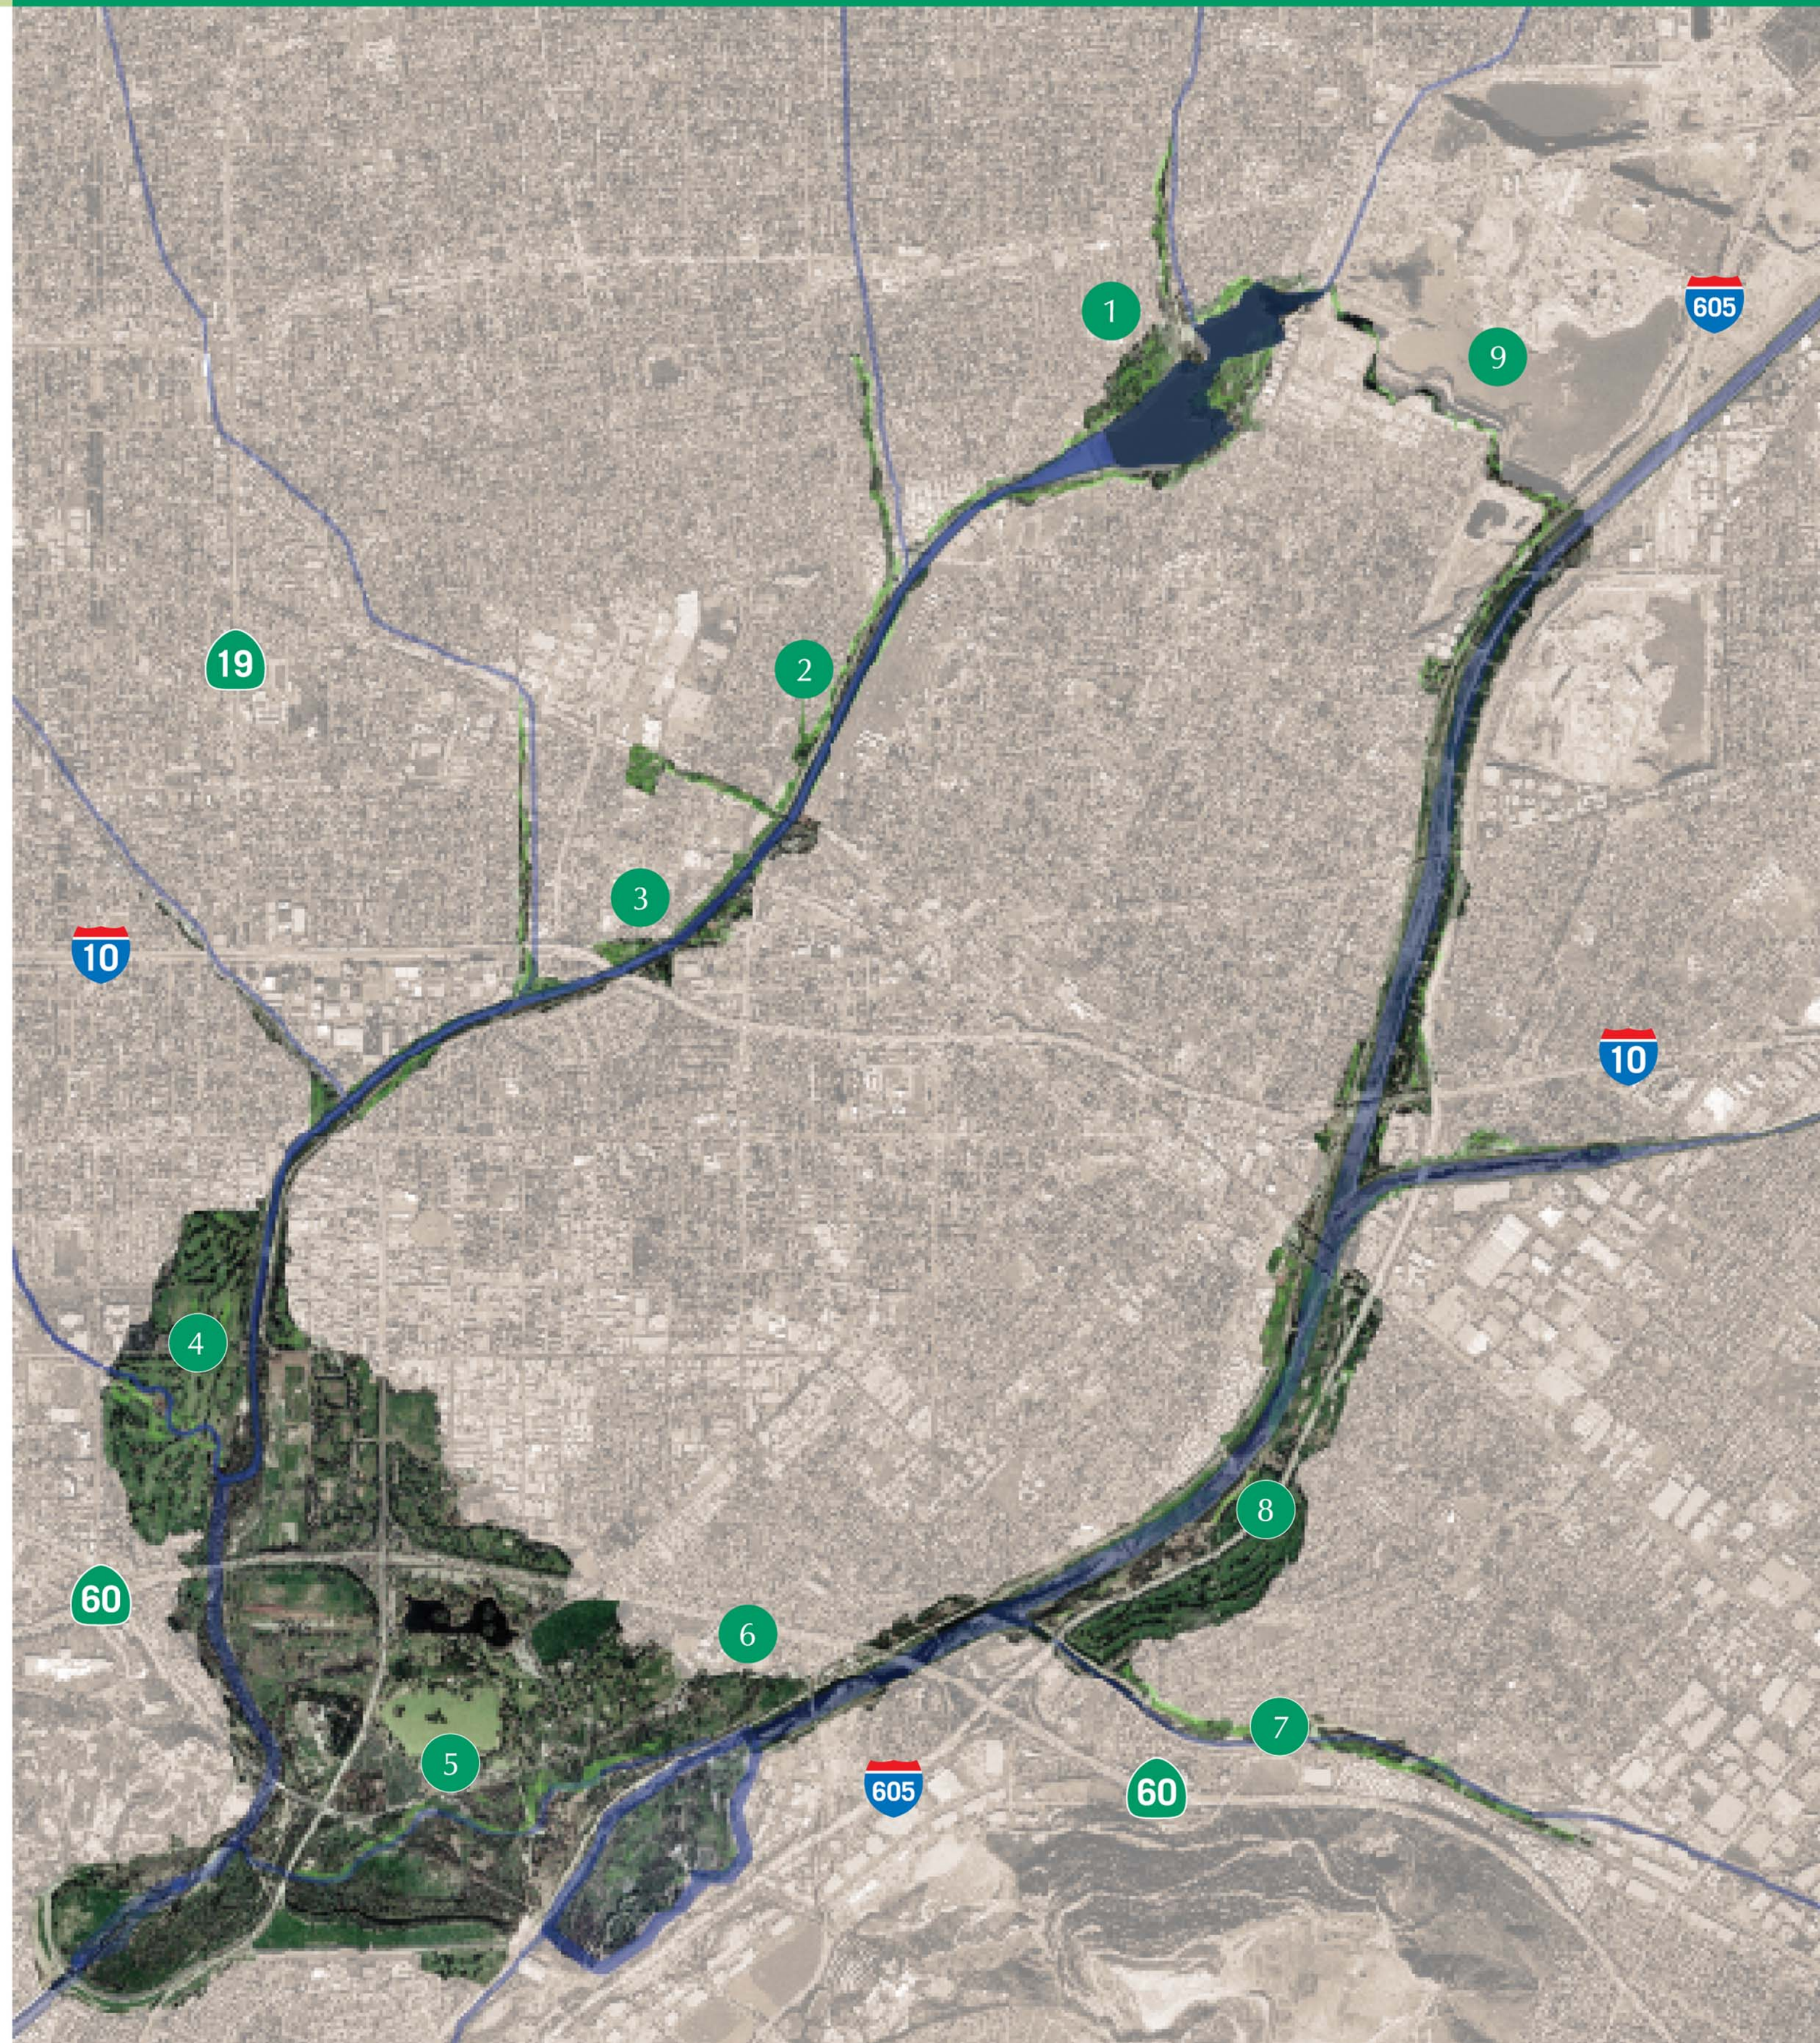

## Río Hondo River Park

Río Hondo River Park will create 5 miles of pedestrian and equestrian trails connecting existing parks like Pioneer Park and add new parks like Wetlands Park on vacant properties.

## Alhambra Wash

Alhambra Wash, located in the Whittier Narrows Dam flood plain, presents a tremendous opportunity to remove the concrete from the channel and create a natural braided stream across the golf course.

## Lario Creek

Lario Creek, now used to transfer water from the San Gabriel River to the Río Hondo, will be rebuilt to recreate the historic appearance of the San Gabriel River.

## San Gabriel River Discovery Center

The Discovery Center, destined to be a major attraction along the emerald necklace, will tell the story of the River and its remarkable inhabitants in a modern building incorporating the latest in green building technologies.

## San Jose Creek

Native plants are being restored on slopes along 7,000 feet of this well watered reach of San Jose creek.

## Woodland Wilderness Park

The Woodland Farms Duck Farm, once home to hundreds of domestic ducks, is now being restored as a 1.5 mile long river-front park for wild ducks and those who admire them.

## Bike Trail Connection

The key to the emerald necklace is a proposed landscaped trail link between Peck Park and the San Gabriel River to connect bikeways.
